PREMIUM NUTRIENTS

YOU'LL NEVER GO BACK

Perfectly balanced, formulated with the scope of providing the grower a revolutionary level of control over the nutrition of the plants. They guarantee an explosive growth, increased yield and superior quality of the final product. Our nutrients favor the expression of a plant's genetic potential and they are suitable for any application in forced cultivation environment.

PREMIUM NUTRIENTS VEG A & B

2 PART VEGETATIVE NUTRIENT

Premium Nutrients VEG A & B is a bi-component nutrient with all the micro and macro nutrients required for a flourishing vegetative growth. It is specifically formulated to provide the plants a stable and ready - available full and balanced spectrum of elements

PREMIUM NUTRIENTS BOOSTER A & B

TRANSITION STAGE AND BUD ENANCHER

Premium Nutrients BOOSTER A is a mix of macro-nutrients and magnesium specifically formulated to improve yield through the optimization of the transition between vegetative and flowering stage, preparing the plant to produce an increased number of flowers.

Premium Nutrients BOOSTER B is specifically formulated to push the cultivation toward the harvest. It contains higher concentrations of phosphorous and potassium to supply the higher demand of macro-nutrients during flowering. The solution is enriched with a mix of micro-nutrients that promotes the biosynthesis of amino acids, vitamins and enzymes involved in the production of complex sugars and essential oils.

CAL - MAG

MICROELEMENTS SUPPLEMENT

Premium Nutrients BOOSTER CAL-MAG is a calcium, magnesium and iron supplement in readily-available forms for plants. It prevents nutritional disorders and is suitable also for leaf applications. Diluted in solution together with the other nutrients it acts as a catalyst in the absorption of all the other essential minerals.

MOSA 7%

MOSA 7% is a mixture based on microelements containing Zinc, Molybdenum, Pure and stabilised Monosilicic Acid extremely bioavailable for the plant.

The innovative technology used for the extraction allows to reach revolutionary monosilicic acid concentrations. It causes a thickening and strengthening of the cell walls with accumulation of bioavailable silicon creating a mechanical barrier that improves the resistance of the plant against abiotic and biotic stresses. It increases the efficiency of the nutrient solution by acting as an efficient transporter establishes an optimal balance between nutrients by controlling the phenomena of antagonism and accumulation of salts.

MOSA 7% improves crop yield, increases the quality of productions, improves the response of self-defense of the plant, reduces and controls the effects of stress, reduces stomatal transpiration, improves the shelf life, color and conservation of crops.

IDROPOTS & IDROCAP

AN UNPRECEDENTED DESIGN

Much More Than a pot for Soilless Cultivation. An Innovative, simple, reliable, and eco-friendly hydroponic system that dramatically improves performance in irrigation diffusion and grow media drying rate.

IDROPOT

Available in 2.25L and 4.5L versions. Micro-perforated design, complete with footed and reverse cone bottom for unprecedented gas exchange between substrate and atmosphere, promoting uncompromised root growth.

Eliminates the effect of root spiralisation and reduces post-transplant stress. It takes the concept of air pruning to the extreme and ensures perfect drainage. They work in combination with all substrates, and with any growing technique.

IDROCAP

Diffuser device for precision irrigation. Optimises the effectiveness and distribution of irrigation with savings in water, time and money. It allows uniform wetting of the substrate surface with automatic irrigation systems and manual irrigation, stimulating a more natural dispersion of water.

Slots provided to attach up to 4 drippers. It helps maintain a healthier environment by blocking the passage of light on the surface of the substrate.

IDROTRAYS

MAXIMIZE YOUR PRODUCTION

Idrotrays Infinity™: modular ABS plastic trays available in three different configurations of 120 cm x 120 cm x 10 cm depth, designed to be seamlessly integrated into your commercial setting.

By combining different modules, you can create an extended growing space of your desired length to maximise the usable space in your facility.

IDROTRAYS STANDARD™

Idrotrays Standard™ : plastic ABS trays available in a full range of standard sizes, suitable for any type of grower in any growing environment.

The tray design allows perfect drainage of the nutrient solution, and increased edge height allows for easier, risk-free flooding. As always, only the best materials on the market are used for production.

These trays are manufactured to last the test of time. They are completely safe to use, and are designed by growers, for growers.. Ecco perché Idrolab Hydroponics® stampa con plastica ABS vergine:

- Chemical Resistant
- Extreme dimensional stability: low water absorption and low thermal expansion
- Non-leaching characteristics
- 100% recyclable
- Melting point among the highest in the market.

IDRORACKS

DESIGNED FOR YOUR NEEDS

A static bench that can be increased in length by 1.2 m² increments. **Idrorack** supports vertical expansion up to 3 tiers. Fix it directly to the floor, or install castor wheels or rails to help maximise your cultivation space.

FIRST LEVEL

STANDARD SURFACE AREA

SECOND LEVEL

DOUBLE SURFACE AREA WITH A MAXIMUM HEAD HEIGHT OF **180 CM** BETWEEN LEVELS

THIRD LEVEL

TRIPLE THE SURFACE AREA WITH UP TO **90 CM** AVAILABLE HEAD HEIGHT BETWEEN LEVELS

LIGHTING FIXING

Design for easy integration with any lighting system.

LOCKING SYSTEM

Locking system reduces the time, and the hardware required for assembly.

HANDLING ACCESSORIES

Can implement castor wheels to allow movement within your grow facility.

IDRORACKS & IDROROLL HEAVY

idrolab[®]
— HYDROPONICS —

IDROROLL HEAVY

OPTIMIZE WORKFLOW AND MAXIMIZE PROFIT

Optimizing workflow and maximizing profit are essential goals for any grower. Our Heavy versions of the popular idrorack and idroroll are designed precisely with these objectives in mind.

With a higher load capacity, vertical development reaching up to 6 meters, and all-metal construction with a minimum thickness of 2mm, these units are built to handle the demands of scaling up production.

UP TO 6 MTS

CUSTOMIZED FOR YOUR SPACE

We understand that every growing space is unique, which is why our Heavy units are available in nearly every size imaginable. Designed to seamlessly integrate with our range of standard trays, they offer a multitude of customizations to suit any space and cultivation technique.

LIGHTING FIXING

Design for easy integration with any lighting system.

LOCKING SYSTEM

The locking system reduces the time and hardware required for assembly.

MODULAR DESIGN

Choose the length of your system and where to place grow levels without any limits.

SAFE STACKING

Safely reach a height of 6 meters to increase your profits.

BUILD IN SLOPE

Constructed on a slope to promote consistently perfect drainage or runoff water.

MAKE IT MOVE

Move your vertical rack with minimal effort by equipping it with a handling system.

RDWC SYSTEMS

DEVELOP THE FULL POTENTIAL

HOW IT WORKS

RDWC systems are able to push plants to develop to their full genetic potential at an accelerated rate. Constant recirculation and high dissolved oxygen levels optimise nutrient uptake and increase the shelf life of the nutrient solution. Continuous fluid movement ensures pH, EC, and temperature levels across all modules in the system.

HIGH PERFORMANCE ACCELERATED GROWTH

Our new **RDWC systems** are the ultimate solution for the most demanding growers. The terpene profile and essential oil content that plants develop when grown with this technique are globally recognised and sought after.

We want to enable growers to work with a reliable system, manufactured to last with the best materials available on the market. We introduced a new cultivation module with increased thickness and a lower drain point that allows complete drainage of the nutrient solution. This improved system also utilises new net pots, new lids, and new seals for maximised longevity. Every detail is designed to enhance the grower's experience when using our RDWC system.

All systems are easily integrated with automation and control devices. Available in 24 standard configurations and endless custom configurations to suit your specific needs.

Designed for rapid vegetative growth and high-intensity flowering with up to 4 plants per square meter.

Designed for a longer vegetative growth and flowering with a reduced number of plants per square meter

For special spacing requirements, contact our team who will help you configure the RDWC system by finding the best possible solution for your space

The URIEL 600-A represents a pinnacle in LED design and manufacturing, boasting a unique construction from 4 mm solid aluminum sheets that ensures unparalleled solidity and passive dissipation capabilities. Crafted meticulously by hand in our factory, each LED embodies our commitment to quality and innovation.

When you choose Idrolab Hydroponics, you're not merely purchasing a piece of growing equipment; you're becoming part of a network deeply entrenched in the industry. Our dedication extends beyond the point of sale, with after-sales support and assistance that sets a new standard. Additionally, our agronomic consultations are renowned throughout Europe for their value and expertise.

URIEL 600-A PPFD MAP

Tested on a 4x4 ft grow tent

Furthermore, our laboratory stands ready to create custom lighting solutions tailored to your specific crop needs. Whether you require specialized spectrums, intensity levels, or coverage, our team can develop a lighting study to optimize your growth environment.

Contact us today to discover how the URIEL 600-A and our comprehensive services can elevate your cultivation endeavors to new heights.
